Cabinet Installation

One page. No software, no commands.

	Step
1	Install the Raspberry Pi unit in the cabinet and connect the network cable.
2	Set the DIP switch to this cabinet's number (see the DIP table below). Do this BEFORE powering on.
3	Power on.
4	Wait about 3 minutes. The unit reboots by itself ONCE. **Do not unplug the power** during this time.
5	Ask the control room to confirm the cabinet is online (dashboard / MQTT). Done.

DIP table (fill in before giving this page to the technician)

Cabinet	DIP 1-2-3-4	Cabinet	DIP 1-2-3-4

If something looks wrong

- Never open the unit or change the SD card.
- If the cabinet is not online after 10 minutes: check the cable and the DIP number, then call support. Do not repeatedly switch the power off and on.
- Never change the DIP switch while the unit is running; change it only with the power off.
- Support: _____
